as3 requires media encoder A: I found my answer. Adobe Illustrator, InDesign and Audition are no longer supported in CS6 by Adobe. They have moved to more 'enterprise' applications. Adobe has now released a standalone version of Adobe Media Encoder which can be downloaded at the Adobe download page. Adobe Media Encoder is a standalone package, meaning that it is not part of the Creative Cloud. You can run it on your own. The package contains both Adobe Media Encoder and Adobe Media Encoder Studio, Adobe Media Encoder Studio is an interactive companion application that allows you to quickly and easily customize and automate the settings of your projects. For example, you can use it to change or batch convert the output settings, remove metadata, or apply presets. You can use it directly from within Media Encoder itself. You can find it under File > Preferences > Advanced > Application. You can also set up presets using the same tab in the Adobe Media Encoder Studio. The FBI is requesting 1,500 hours of flight time for its space plane, which will make its first flight later this year, a development that was revealed by a contracting company on Tuesday. Rockwell International, which is making the plane, said on Tuesday that it was awarded a contract to design, develop and build the X-37B, which will be operated by the National Reconnaissance Office, a government agency that oversees spy satellites. Rockwell will begin producing the first plane in August, and the plane will enter service in 2015. It will have a 40-foot wingspan and weigh 2,000 pounds. It will be able to stay in orbit for seven months. The X-37B will be similar to the Orbital Sciences' Osprey, which was built by Northrop Grumman for the Air Force and has been flying since May 2009. Orbital received a \$1.9 billion contract to build the space plane and then lost it to Boeing this year. Click here to watch a video of the X-37B program. Orbital will continue to build the plane until its contract is complete in 2018. Rockwell's contract is valued at \$81 million, and it will be paid \$31 million of that amount once the plane is delivered.1. Field of the Invention The present invention relates to a thermosensitive recording material having a desired image thermosensitively formed thereon, and 82157476af
